We are always there to help you out. Thank You. PUBG Mobile Android iOS A PUBG Mobile Hack is any app, mod or technique that allows you to get an unfair advantage over other players in the game, get loot and kills, survive longer get more free BP and free UC money on Android and iOS mobile alike. - While many different cheating methods requiring no root and no jailbreak exist, hacks and generators for unlimited free Unknown Cash (UC) and free Battle Points (BP), free in-game purchases and skins do not exist and are always FAKE! PUBG Mobile Wallhack The use of a wallhack allows a player to see enemies, items, supply drops, cars and other important game items through walls by highlighting them using colored boxes or overlays, allowing them to loot more easily, find or avoid players and generally survive a lot longer, therefore earning more XP, rewards, BP, UC and loot crates for more skins and other goodies. A regular wallhack for PUBG Mobile will almost always come in the form of a modded APK or iOS app mod, which means that the code of the game client has been modified to show you enemies and items by default. If you are looking to cheat in other Battle Royale games also check out our cheats for PUBG Lite, PUBG on PC, Free Fire Mobile and our Fortnite Mobile cheats for even more great fun. PUBGM Aimbots Auto aiming mods and apps, also known as 'aimbots', are automated bots that will auto aim and shoot for you, allowing you to get lots of kills and stay alive while doing it. While this may sound simple, it is one of the most sophisticated and powerful hacks available for PUBG Mobile and also exceedingly rare to see. Most aimbot apps for Android and iOS games will come in the form of increased aim assist. In this kind of auto aiming cheat the games default aim assist has been modded to do a lot more of the aiming work for you and other mods will actually create their own aiming scripts, but those are still extremely rare on mobile devices at this point. APKs Mods & iOS Mods The cheating methods mentioned above and others that may or may not be possible to use in PUBG Mobile, such as speedhacks, teleporting, noclip, superjump, item spawning ect usually come in the form of a mod. A mod refers to a modified or modded game client in the form of an APK (Android) or IPA file (iOS). These files are usually downloaded and simply installed on your device. Advanced mods will require you to have a file explorer installed on your device to import some files. Mods will only work for the specific game they were made for. If PUBG Mobile gets an update or patch, then a new mod for the new version with the same hacks implemented has to be downloaded and installed on your device in order for cheats to keep working for you. When downloading PUBG Mobile Mods make sure you are downloading from trustworthy cheat providers. Use our FreeFinder to find free mods, hacks and downloads for PUBG Mobile. Do not fall for human verification scans, surveys and fakes. Mod Menus Mod menus are the most sought-after and precious cheat for PUBG Mobile, since they are special mods that come with a menu that allows you to switch every single cheating option and every single script included in the PUBG Mobile hack on and off. Such a mod menu may activate all kinds of cheating options ranging from claiming free crates for free skins, UC and other goodies to actual trainer options, such as aimbot, wall hack, ESP, noclip, nospread and other powerful cheating options. Mod menus are the way most players prefer to use cheating tools in PUBG Mobile, because they are easy to download, simple to use and may come with anything from scripts, simple mods to the best hacks available for PUBG mobile online. Free Unknown Cash (UC) and Battle Points (BP) Generators Any hack or tool that claims to allow you to get unlimited free UC or BP in PUBG Mobile is not real, is fake and a scam. Please, do not fall for these fake cheats floating out there on the internet and do not download any of them of complete any 'human verification'. - PUBG Mobile is an online shooter and all your skins, unlocks, your health, account data including money, bp, uc, XP and so on are all stored on the game servers and cannot be affected by any tools whatsoever. Please stay safe and realistic when looking for working cheats. Money mods and mod APKs with money cheats simply cannot exist for Android or iOS at all. While game servers can technically be hacked to circumvent the server-side processing of UC / BP, this would not only be extremely highly illegal, but also exceedingly, unrealistically difficult to do and can certainly no be done through some generator website. Hacks for Android On android mobile devices, such as tablets, phones and similar, the way to gain an advantage in PUBG Mobile is primarily through APK mods, which are modified versions of the original APK that come with trainer options already coded into the game itself. Installing modded APKs can require a rooted Android device, but may also require no root, may require you to import modded OBB files using a file explorer or may not. The main difficulty when it comes to Android modding is finding legitimate sources for you downloads, which is why we recommend using HackerBot FreeFinder to skip all the fakes and find files from proven and legitimate sources. Cheats for iOS Of all the mobile platforms one could play PUBG Mobile on, iOS is the one that is making it the hardest to cheat. While it is most definitively possible to use a jailbroken iOS device along with a modded appstore to install a modded version of the PUBG Mobile app on iOS, it is both harder to do and harder to find working files on iOS than it is on Android. For this reason we generally recommend either switching to Android or using an Android emulator instead. However, there are trustworthy modding sites for iOS game mods that do offer mods for PUBG Mobile as well and will allow you to cheat on iOS if you are willing to go through the long and involved process of getting there. Exploits, Bugs and Glitches Exploits are some of the rarest and potentially most powerful cheats out there for PUBG Mobile. Exploiting is the use of bugs, bugged game mechanics and glitches in order to gain an advantage in the game. Exploits therefore are extremely temporary in nature, as the underlying bugs they are based on are generally only in the game for a limited time as well. The great upside of bugs and glitches is that they offer essentially unlimited potential: bugged maps may get you a god mode by glitching under them map, bugged weapons may give unlimited ammo, even unlimited BP and UC may be possible if rewards are bugged at some point. Item duplication is another commonly found exploit that crops up in most games at some point in their life cycle. However, the developers will inevitably hotfix and exploits they find, so you need to be quick to realize and use them as soon as they become available. Game Hacking Tools / Apps While game modding is certainly not without its challenges and installing modded APK files or iOS mods can still be quite a challenge for newbie cheaters, trying to use game hacking tools will put into perspective how easy game modding for PUBG Mobile actually is. - Using game hacking tools is generally quite an involved process that required quite a lot of knowledge, experience or following in-depth tutorials and guides. However, if mastered this game cheating technique is extremely consistent, as the methods and procedures used here generally do not get outdated quickly, meaning you do not need to update your software or your process with every update, hotfix or new version of PUBGM that is released. Also there are actual ways to make game hacking tools, such as memory editors work with no root and no jailbreak under certain circumstances and if one was so inclined. The most popular tools used are Game Guardian for Android and GameGem for iOS respectively. If you want to learn the basics and get started on your journey of learning how to hack games yourself, check out this tutorial. Conclusion While there fake cheats are everywhere, legitimate, working and updated mods do exist, most of them are APK mods, but iOS mods exist as well. Aimbots and wallhacks are the most effective cheats when it comes to surviving, finding good loot from care packages, avoiding and finding players ect. Unlimited free UC / BP can only be obtained through microtransactions, no tool can provide these features and the same goes for free skins, season pass ect. Auto aiming software should be used carefully and respectfully at all times, as to not risk getting your PUBG mobile account banned forever. Overall, cheaters and game hackers won't have an extremely easy time with PUBGM, but they will be able to do their thing as they always do. And if they are going to do what they always do, they might as well do it safely and use HackerBot to find safe cheats from legitimate and trusted sources.
